

GEORGETOWN DELTAWAVE SYNTHETICS STRATEGIES

UNDER 5/6 (D-CIRCLES)

UNDER 5 STRATEGY WORKING 83%

- ❖ Make sure 3 or more winning digits: 0,1,2,3 or 4 are competing for % or equal with a minimum range of 0.2
- ❖ Make sure if the winning digits are above or equal to 10.2% and increasing in percentage.
- ❖ Make sure the winning digits have the 2nd most appearing and the green bar
- ❖ Make sure the losing digits are below 10%
- ❖ The red bar and 2nd least doesn't matter where they are placed. If they are on the losing digits, make sure their % difference is 0.5 and above and not increasing, they should be constant
- ❖ Make sure the winning digits are increasing in percentage and constantly/frequently touched by the cursor

ENTRY MODEL

- Wait for digit 7,8 or 9 to appear 3 or more times consecutively then run your bot (USE DELTAWAVE SPEEDBOT FOR TIMING)
- If there is a consecutive touch of the under digit, then use digit 7 or 8 as your entry

N/B: MAKE SURE YOU HAVE A GOOD INTERNET FOR A SMOOTH TRADING TO AVOID SKIPPING DIGITS

The strategy is tested and working
