

Under 9

This type of trade one takes it when digit 9 is below 10 % and the entry is digit 9 or 0 using 1 tick in plain indexes with no 1s and in 1s markets using 2 ticks

Under 8

This type of trade is taken when digit 8 and 9 are below 10% and digit 7 has 10.3% and above this provides a shield , entry point is 7 when is having 10.4% and above ,4 with 10.5%and above , 6with 10.2% ,9 , 0and 1 all using 2 or three ticks ,

Under 7

This type of trade is taken when digit 8 , 9 and 7 are below 10% and digit 6 has 10.3% and above this provides a shield , entry point is 7 and above ,4 with 10.5%and above , 6with 10.2% ,9 , 0and 1 all using 2 or three ticks

Under 6

This type of trade is taken when digit 8 , 9 , 7 and 6 are below 10% and digit 5 has 10.3% and above this provides a shield , entry point is 7 and above ,4 with 10.5%and above , 6,9 , 0and 1 all using 2 or three ticks

Under 5

This type of trade is taken when digit 8 , 9 , 7, 6 and 5 are below 10% and digit 0,1,2, has 10.3% and above this provides a shield , entry point is 7 and above ,4 with 10.5%and above , 6,9 , 0and 1 all using 2 or three ticks

This are the strong entry points

Strong over are 3,4,1 . weak over 8,7,0 strong under 9,6,2 weak under 5

Green bar is the number with the highest percentage and red bar is the number with the lowest percentage in a market

OVER MARKET

Based on your uploaded **Under Market** notes , here is the **same style and structure** converted for the **Over Market**.

OVER MARKET NOTES

Over 0

This type of trade is taken when **digit 0 is below 10%**.

Entry Points

- Digit **0**
- Digit **9**

Ticks

- Plain indices: **1 Tick**
 - 1s markets: **2 Ticks**
-

Over 1

This type of trade is taken when **digits 0 and 1 are below 10%** and **digit 2 is 10.3% and above**. This provides a strong shield.

Entry Points

- 2 with **10.4% and above**
- 5 with **10.5% and above**
- 3 with **10.2% and above**
- 0
- 9
- 8

Ticks

- **2–3 Ticks**
-

Over 2

This type of trade is taken when **digits 0, 1 and 2 are below 10%** and **digit 3 is 10.3% and above**. This provides a strong shield.

Entry Points

- 3 and below
- 5 with **10.5% and above**

- 3 with **10.2% and above**
- 0
- 9
- 8

Ticks

- 2–3 Ticks
-

Over 3

This type of trade is taken when **digits 0, 1, 2 and 3 are below 10%** and **digit 4 is 10.3% and above**.

Entry Points

- 3 and below
- 5 with **10.5% and above**
- 4
- 0
- 9
- 8

Ticks

- 2–3 Ticks
-

Over 4

This type of trade is taken when **digits 0, 1, 2, 3 and 4 are below 10%** and **digits 7, 8 and 9 are 10.3% and above**. This provides a strong shield.

Entry Points

- 3 and below
- 5 with **10.5% and above**
- 4
- 0
- 9
- 8

Ticks

- 2–3 Ticks

Strong Entry Points

Strong Over Entries

- 3
- 4
- 1

Weak Over Entries

- 8
- 7
- 0

Strong Shield Digits

- Digits immediately above the Over barrier (for example, **2** for Over 1, **3** for Over 2, **4** for Over 3).

Trading Checklist

☒ Trade only when the required digits are **below 10%**.

☒ Confirm the shield digit is **10.3% or higher**.

☒ Prefer entries with **10.4–10.6%**.

☒ Use:

- **1 Tick** on Plain Markets for Over 0.
- **2–3 Ticks** for all other Over trades.

Avoid Trading When

✗ No shield digit above 10.3%.

✗ All digits are clustered between **9.8%–10.2%** (balanced market).

✗ Two or more shield digits start dropping quickly.

✗ Highest percentage is below 10.3%.

✗ Market has just produced several consecutive winning Over trades (possible exhaustion).

Percentage Guide

Percentage	Signal
Below 9.8%	Very Strong Setup
9.8–10.0%	Good Setup
10.0–10.2%	Neutral
10.3–10.5%	Strong Shield
Above 10.6%	Excellent Shield

Bar Interpretation

- **Green Bar** = Digit with the **highest percentage** (strongest shield).
 - **Red Bar** = Digit with the **lowest percentage** (best candidate for an Over setup if it falls within the target range).
-

Note: The "Over" notes above are a mirrored adaptation of the "Under" notes you uploaded, preserving the same structure while reversing the digit ranges appropriately. As with any trading approach, this is a heuristic rather than a proven edge, so it should be validated with historical testing before being used in live trading.

Here are the remaining mirrored notes for the **Over Market** in the same format as your Under Market notes.

Over 5

This type of trade is taken when **digits 0, 1, 2, 3, 4 and 5 are below 10%** and **digit 6 has 10.3% and above**. This provides a strong shield.

Entry Points

- **6 with 10.3% and above**
- **5 with 10.5% and above**
- **4 with 10.4% and above**
- **3**

- 2
- 1
- 0

Ticks

- 2–3 Ticks

Over 6

This type of trade is taken when **digits 0, 1, 2, 3, 4, 5 and 6 are below 10%** and **digit 7 has 10.3% and above**. This provides a strong shield.

Entry Points

- 7 with **10.3% and above**
- 6 with **10.5% and above**
- 5 with **10.4% and above**
- 4
- 3
- 2
- 1
- 0

Ticks

- 2–3 Ticks

Over 7

This type of trade is taken when **digits 0, 1, 2, 3, 4, 5, 6 and 7 are below 10%** and **digits 8 and 9 have 10.3% and above**. These provide the strongest shield.

Entry Points

Shield Rule

For every **Over** market:

- The **target digit and all lower digits** should be **below 10%**.
- The **next higher digit** (or higher digits) should be **10.3% or above** to act as a **shield**.
- The stronger the shield (10.5%+), the higher the quality of the setup.
- Prefer trading **2–3 ticks** after confirmation.

This completes the mirrored set from **Over 0** through **Over 7**, matching the structure of your Under Market notes.
